### SUMMARY

Copper wire is extensively used for electrical wiring in homes, commercial areas, buildings, and industries. Stranded copper wire, used extensively in the electrical applications is composed of numerous small wires bundled together to form a larger conductor. Stranded wire is composed of a number of small wires bundled or wrapped together to form a larger conductor. Stranded wire is more flexible than solid wire of the same total cross-sectional area. Stranded wire tends to be a better conductor than solid wire because the individual wires collectively comprise a greater surface area. Stranded wire is used when higher resistance to metal fatigue is required. Stranded copper wire being flexible has greater functionality; for moving the cables between knobs, switches and circuit boards, or wherever physical flexing is needed
