SUMMARY

Ear Syringe is a simple pump consisting of a plunger that fits tightly in a tube. The plunger can be pulled and pushed along inside a cylindrical tube (called a barrel), allowing the Ear Syringe to take in and expel a liquid or gas through an orifice at the open end of the tube. Ear Syringe are often used to administer injections, insert intravenous drugs into the bloodstream, apply compounds such as glue or lubricant, and measure liquids. Ear Ear Syringe helps remove stubborn ear wax build-up. In some cases the stubborn ear wax can cause a blockage and will not move naturally out of the ear canal. Ear Clear Ear Syringe was developed to thoroughly wash the ear canal clear of wax.
