### SUMMARY

Sulphur recovery is defined as the conversion of hydrogen sulfide to elemental sulphur. Hydrogen sulfide is one of the major by-products of processing high sulphur crude oils and natural gas. Increasing focus on regulations to reduce levels of sulphur in products and lower sulphur emissions has in turn resulted in increase in demand for deployment of sulphur recovery technologies. Sulphur recovery technologies are mainly based on two processes: Claus and Claus Process and Tail Gas Treatment process.

This report includes market status and forecast of global and major regions, with introduction of vendors, regions, product types and end industries; and this report counts product types and end industries in global and major regions.
