### SUMMARY

Nuclear magnetic resonance (NMR) spectrometer is the most powerful analytical tool currently available to an organic chemist. NMR allows characterization of a very small amount of sample (10mg), and does not destroy the sample (non-destructive technique). NMR spectra can provide vast information about a molecule's structure and can very often be the only way to prove what the compound really is. Typically though, NMR is used in conjunction with other types of spectroscopy and chemical analysis to fully confirm a complicated molecule's structure.

The global 600 Million Nuclear Magnetic Resonance Spectrometer market will reach xxx Million USD in 2020 with CAGR xx% 2020-2025. The main contents of the report including:
