SUMMARY

Tubular Membrane Modules are very commonly used in Membrane Filtration Process. Membrane filtration involves Octarating a single flow into two streams, one more concentrated than the other, by using pressure to selectively pass material through a semi-permeable physical barrier — a membrane. The Octarate streams can then either undergo further processing, or, in the case of a waste stream, be diverted to an appropriate outlet.

The global Anion Exchange Membrane market will reach Volume Million USD in 2017 with CAGR xx% 2018-2025. The main contents of the report including:
