SUMMARY

Artemisinin is a sesquiterpene lactone containing an unusual peroxide bridge which possesses the most rapid action of all current drugs against *Plasmodium falciparum* malaria. It is isolated from the plant *Artemisia annua*, sweet wormwood, an herb employed in Chinese traditional medicine. It can now also be produced using genetically engineered yeast. Because artemisinin itself has physical properties such as poor bioavailability that limit its effectiveness, semisynthetic derivatives of artemisinin have been developed. These include: Artesunate, Artemether, Dihydroartemisinin, Artelinic acid, Artemotil. Treatments containing an artemisinin derivative (artemisinin-combination therapies, ACTs) are now standard treatment worldwide for *P. falciparum* malaria. This report analyses the data of API, including the price, production, consumption and other information.
