Abstracts

Summary

Biofeedback is a process that enables an individual to learn how to change physiological activity for the purposes of improving health and performance. Precise instruments measure physiological activity such as Brainwave, heart function, breathing, muscle activity, and skin temperature. These instruments rapidly and accurately feedback information to the user. The presentation of this information—often in conjunction with changes in thinking, emotions, and behavior—supports desired physiological changes. Over time, these changes can endure without continued use of an instrument.

The global Biofeedback Instrument market will reach Volume Million USD in 2017 with CAGR xx% 2018-2025. The main contents of the report including:
