### SUMMARY

Biofuels are non-fossil fuels. They are energy carriers that store the energy derived from organic materials (biomass), including plant materials and animal waste. First-generation biofuels are currently produced from food crops such as sugar cane and rapeseed. They include bioethanol (made from sugars and starch) and biodiesel (made from vegetable oil). Second-generation biofuels are under development and will be derived from non-food plant matter such as crop residues and agricultural or municipal wastes.
