SUMMARY

Catheter Stabilization Device is secured or stabilized to avoid accidental elimination, reduce trauma to the urethra and the bladder, and decrease inflammation of tissues. The main objective of catheter stabilization is to stop excessive pull or traction on the catheter. Catheter Stabilization Devices are a more effective alternative to tape in helping to improve clinical outcomes, quality of care and economic efficiencies. Improved adhesive products and securement devices are essential to provide increased catheter stability. Such products may reduce catheter dislodgement and the necessity of reinsertion with its associated needle stick risk.

The global Catheter Stabilization Device market will reach xxx Million USD in 2020 with CAGR xx% 2020-2025.

The main contents of the report including:

Global market size and forecast

Regional market size, production data and export & import

Key manufacturers profile, products & services, sales data of business

Global market size by Major End-Use

Global market size by Major Type

Key manufacturers are included based on company profile, sales data and product specifications etc.:
