SUMMARY

Chemical Management Services (CMS) is a business model in which a customer purchases chemical services rather than just chemicals. These services can encompass all aspects of the chemical management lifecycle including: procurement, delivery/distribution, inventory, use (including chemical substitute research), collection, monitoring/reporting, training, treatment, disposal, information technology, and even process efficiency improvements; each of which poses its own costs and risks. Under CMS, the service provider is compensated based on the quality and quantity of services provided that reduce chemical lifecycle costs, risks, and environmental impacts, not on the volume of chemical sold. Therefore the service provider has the same objective as their customer: to reduce chemical use and cost. Both participants achieve bottom line benefits through reduced chemical use, cost, and waste.

The global Chemical Management Services (CMS) market will reach xxx Million USD in 2019 with CAGR xx% 2019-2024.
