SUMMARY

Domain Name System (DNS) is a decentralized naming system for computers, services, or any resource connected to the Internet or a private network. It consists of various information with domain names assigned to each of the participating entities. It translates the domain names into the numerical Internet protocol (IP) addresses required for identifying computer services and devices with the underlying network protocols. The DNS is an essential component of the functionality of the Internet, as it provides a worldwide, distributed directory service.
