## Abstracts

### Summary

Though there are several different dump truck designs, the basic components of dump trucks remain more or less the same for all of them. The main body of the dump truck is generally based on that of a flatbed truck, with one axle beneath the cab and anywhere from one to three axles beneath the dump box. The dump box itself generally has a tailgate that is hinged at the top so that it will open automatically when it is being dumped. The dumping mechanism is powered hydraulically in order to prevent compression problems that can sometimes be encountered when using pneumatic systems. The engine of the dump truck can be either gasoline-powered or diesel-powered, but is generally a large internal combustion engine regardless of the fuel type used.

The global Dump Truck market will reach Volume Million USD in 2017 with CAGR xx% 2018-2025. The main contents of the report including:
