Summary

Electrodialysis (ED) is used around the globe in many Laboratory, laboratory and recycling environments. ED is a Laboratory membrane separation process in which ions are transported through ion- permeable membranes, from one stream to another, under the influence of a voltage potential gradient. Two types of membranes are used: cation-exchange membranes only allow cations to transport, and anion-exchange membranes only allow anions through. These membranes are impermeable to liquids. A large number of alternating cation and anion-exchange membranes are assembled to form diluate and concentrate compartments in what is known as an electrodialysis stack.

The global Electrodialysis Equipment market will reach Volume Million USD in 2017 with CAGR xx% 2018-2025. The main contents of the report including:
