Summary

Enzyme-linked immunosorbent assay (ELISA), also known as an enzyme immunoassay (EIA), is a biochemical technique used mainly in immunology to detect the presence of an antibody or an antigen in a sample. The ELISA has been used as a diagnostic tool in medicine and plant pathology, as well as a quality-control check in various industries, such as ELISA application in food industry. In simple terms, in ELISA, an unknown amount of antigen is affixed to a surface, and then a specific antibody is applied over the surface so that it can bind to the antigen. This antibody is linked to an enzyme, and in the final step a substance is added that the enzyme can convert to some detectable signal, most commonly a colour change in a chemical substrate.

The Global Enzyme-Linked Immunosorbent Assay (ELISA) market is estimated to reach 135.6 Million USD in 2017. On the basis of region, North America is the largest market segment of Enzyme-Linked Immunosorbent Assay (ELISA), followed by Europe and Asia.
