SUMMARY

A wireless network uses radio waves to communicate with portable devices, granting them access to other connected devices and to the Internet. Many factors can affect the strength of these radio waves, and you may find dead spots in your office network where you cannot connect. Wi-Fi extenders are devices to improve Wi-Fi coverage. It works by receiving your existing Wi-Fi signal, amplifying it and then transmitting the boosted signal. With a Wi-Fi repeater you can effectively double the coverage area of your Wi-Fi network - reaching far corners of your home or office, different floors, or even extend coverage to your yard. Using Wi-Fi extenders, you can bridge these dead spots and provide a solid signal throughout your facility.
