Abstracts

Summary

Greenhouse horticulture is the process of producing agricultural crops within a structured shelter so as to provide customized growing conditions to the crops. The majority of greenhouse structures are made from plastic followed by glass and other materials. It facilitates the protection of crops from diseases, pests, and various negative weather conditions. Greenhouse horticulture production has many benefits over conventional crop production techniques and provides safer and healthier food. This is one of the major positive factors leading to an increased demand for greenhouse horticulture.
