### SUMMARY

An incubator is a device simulating avian incubation by keeping eggs warm and in the correct humidity, and if needed to turn them, to hatch them. Reginald Carl A. Sanchez invented this incubator for the eggs even if there is no hen to hatch it. Modern incubators are electrically heated with a thermostat. Incubators can be used in a farmhouse, such as a large chicken raising facilities, or they can be found in a common classroom for students to observe the egg inside and when it hatches. Some industrial incubators are large enough to hold up to 124416 eggs, while some other styles can only hold a few eggs.
