### SUMMARY

Natural gas is a major source of energy. Liquefied natural gas or LNG is natural gas that has been converted to a liquid form for the ease of storage or transport by cooling natural gas to approximately 162 °C. Afterwards, it is stored at essentially atmospheric pressure. Liquefied natural gas takes up about one six hundredth the volume of natural gas in the gaseous state. It is odourless, colourless, non-toxic and non-corrosive. LNG, or liquefied natural gas, is natural gas that is cooled to -260° Fahrenheit until it becomes a liquid and then stored at essentially atmospheric pressure. Converting natural gas to LNG, a process that reduces its volume by about 600 times – similar to reducing the volume of a beach ball to the volume of a ping-pong ball – allows it to be transported internationally via cargo ships.
