SUMMARY

Noise has the effect of raising stress levels, disrupting sleep and generally reducing people's quality of life. Acoustic insulation is a type of soundproofing that attempts to prevent sound from entering or exiting an enclosed space by creating some a barrier between the interior and the exterior area. Because sound is able to travel in more than one fashion, the exact process and choice of materials used to manage sound insulation will vary. Acoustic insulation materials commonly used are various, including boards, blankets, mineral wool, etc.
