SUMMARY

Air purifiers purify the air by trapping air borne contaminants. Dust, mold spores, dust mites, chemicals, odors, and toxins are a few airborne contaminants that an air purifier can trap, but depending on the specific technology that an air purifier uses, certain air purifiers are more adept and safer at trapping particles. Air purifier main components: chassis shell, duct design, filter, motor, power supply, etc. The commercially graded air purifiers are manufactured as either small stand-alone units or larger units that can be affixed to an air handler unit (AHU) or to an HVAC unit found in the household, commercial industries (such as medical air purifier and engineering air purifier) and other industries (including car air purifier) etc.
