### SUMMARY

Antibody services include competitively priced packages and purification options for antibody production. Service Providers offer support for different types and steps of antibody production—from peptide design, synthesis, and carrier protein conjugation to animal immunization, serum collection, or hybridoma fusion, titer analysis, and final antibody purification. They also immunize with recombinant proteins or protein fragments provided by the customers (or expressed and purified in labs using cDNAs from the service providers' extensive in-house genomics library) to generate antibodies in rabbits, chickens, goats, guinea pigs, mice, or rats.
