SUMMARY

Aquaponics is the integration of aquaculture and hydroponics in a reciprocally beneficial water-based system. This arrangement encompasses the growth of a variety of fishes such as goldfish, carp, crappie, tilapia, brim, koi, and bass, as well as plants such as chives and lettuce. The waste from fish litters that turn into nitrates and ammonia are harmful to the fish but are beneficial for plant growth as they help in supplementing essential required nutrients. This creates an extremely maintainable natural system as natural food is available to aquaculture and plants for growth and productivity.
