## Abstracts

### SUMMARY

Catheter Stabilization Device is secured or stabilized to avoid accidental elimination, reduce trauma to the urethra and the bladder, and decrease inflammation of tissues. The main objective of catheter stabilization is to stop excessive pull or traction on the catheter. Catheter Stabilization Devices are a more effective alternative to tape in helping to improve clinical outcomes, quality of care and economic efficiencies. Improved adhesive products and securement devices are essential to provide increased catheter stability. Such products may reduce catheter dislodgement and the necessity of reinsertion with its associated needle stick risk.
