SUMMARY

An embedded computer is an integral part of a larger system that performs a particular task and consists of a microprocessor or a microcontroller, which acts as the processing core. The embedded computer is a computer that is integrated into other devices and is dedicated to the functions of that device. Also referred to as microcontrollers, embedded computers have been used in modern TV sets, motor vehicles, telephones, digital cameras, washing machines, microwaves and dishwashers. The embedded computer is devoted to performing specific tasks and is used in communication, entertainment, science and technology.
