SUMMARY

Fuzes are electronic or mechanical devices attached to ammunition to provide reliable and safe detonations at the desired time and place. These devices control safe separation of ammunition from the delivery platform and trigger its detonation. Missiles, rockets, bombs, shells and other ammunitions form a vital part of the firing capacity of a military in modern warfare. Since these ammunitions are loaded with explosives, there is always a risk of explosion during storage, launching and handling. This requires the incorporation of some security gadgets into these ammunitions. The security system should work until the ammunition is propelled and after the launch, the firing mechanism should take control. In order to accomplish this, an arming mechanism is also required in the ammunition. All the above mentioned necessities are fulfilled by gadgets called fuzes.
