SUMMARY

A pressure sensor is a device that senses pressure and converts it into an electric signal where the amount depends upon the pressure applied. Medical pressure sensors monitor a patient's condition by providing accurate and reliable diagnostics in a broad range of conditions. Typically, medical pressure sensors are used to measure gage or differential pressures. Measurement of these pressures can then be used to calculate volumetric flow rates as well as fluid, gas or air volumes. This report includes both of MEMS type and Medical Pressure Transducer.
