## Abstracts

### SUMMARY

Panel saw is a machine with a sliding table which is used to cut large sheet materials into smaller rectangular sections and pieces, often as part of an initial sizing process. It consists of a circular saw and an upright framework that supports the work piece and a track that the circular saw travels along. Unlike a table saw where the work piece is moved past the cutting blade, with a panel saw the operator moves the circular saw across the work piece, with the work piece fixed in place.
