### SUMMARY

Parylene is a common generic name for a unique series of polymers based on paraxylene. It is a polymer created from a chemical compound known as dimer, which is actually a powder. The dimer is then vaporized, made to undergo pyrolysis, transformed into a gaseous state (now a monomer), cooled, and then introduced to a vacuum chamber where it polymerizes and becomes a film. It is the best protective coating in electronic, aerospace and medicinal fields. Common commercially available parylene mainly contain over parylene N, parylene C and parylene D.
