SUMMARY

Electric water pump is activated by battery and motor only on demand for cooling. The just function minimizes the load on engine. Electric water pumps are a part of a growing number of newer vehicles where higher efficiency engines are demanded. Aside from providing standard engine cooling, they reduce engine load and can be controlled by sensors to provide the necessary amount of coolant at any time. Some new vehicles even use up to three pumps for various systems, including cabin heating, turbocharger and battery system cooling.
