SUMMARY

A biologic is a medicine made using a living system, and historically this was often an animal. Most products being developed as biosimilars are recombinant proteins, or proteins derived from genetically engineered DNA. In this report is a biologic defined as proteins, peptides, hormones or antibodies drugs production by bio-engineered technology, but does not include a vaccine. A biosimilar in this report is a biologic medical product which is copy of an original product that is manufactured by a different company. Biosimilars are officially approved versions of original “innovator” products, and can be manufactured when the original product's patent expires.
