### SUMMARY

Fiber Optic Connector is a device used to connect light from one section of optical fiber to another section of optical fiber. The optical fiber is a long thin cylindrical fiber made from glass or plastic, as tiny as one tenth of a human hair. Since optical fibers are so tiny, fiber optic connectors have to be made with high precision, at the scale of 0.1um which is one hundredth of a human hair. Fiber optic connectors align two fibers end to end so precisely that light can travel from one fiber into another without bouncing off the interface and loss its signal. Besides, fiber optic connectors provide cross connect flexibility for the telecommunication network. So a complicated computer network could be made modular and easy to manage. Optical fiber connectors were introduced with fiber optic technology in the 1980s. Commonly used fiber connectors include the SC connector, FC connector, ST connector, FDDI connector, LC fiber connector and E2000 connector.
