Abstracts

Summary

Steering Columns System is a device intended primarily for connecting the steering wheel to the steering mechanism or transferring the driver's input torque from the steering wheel. The steering column consists of a collapsible housing containing a collapsible rotating shaft. The steering column is connected to the input shaft of the steering gear by a flexible joint. This allows the alignment, and reduces the transmission of road shocks back to the driver. Some of the steering columns have an intermediate shaft, which runs at about an oblique angle, from the column to the steering gear. Some manufacturers fit sensors and control units to the steering column, that provide information to steering control modules as part of an electric assisted or 4-wheel steering system.
