Summary

Stick Electrodes, are metal wires or rods with baked on chemical coatings, commonly used in welding activities. It is made out of materials with a similar composition to the metal being welded. Stick electrodes are consumable, meaning they become part of the weld, unlike the TIG electrodes, which are non-consumable as they do not melt and become part of the weld, requiring the use of a welding rod, therefore, it is under the category-Welding Consumables. These welding consumables are mainly used in arc welding and oxy-fuel welding process. In arc welding technology, consumables are widely used in shielded metal arc welding (SMAW), gas metal arc welding (GMAW), flux-cored arc welding (FCAW), and submerged arc welding (SAW). Moreover, shielded gases are primarily used in oxy-fuel welding, gas tungsten arc welding (GTAW), and gas metal arc welding (GMAW). In these welding activities, varieties of electrodes made from different materials are being utilized. However, given the length of the report is limited, QY Research will focus on stick electrodes only in this report.
