## Abstracts

### SUMMARY

Glycomics is the comprehensive study of glycomes (the entire complement of sugars, whether free or present in more complex molecules of an organism), including genetic, physiologic, pathologic, and other aspects. Glycomics 'is the systematic study of all glycan structures of a given cell type or organism' and is a subset of glycobiology. The term glycomics is derived from the chemical prefix for sweetness or a sugar, 'glyco-', and was formed to follow the naming convention established by genomics (which deals with genes) and proteomics (which deals with proteins).
