SUMMARY

Instrument Transformers are high accuracy class electrical devices designed to transform voltage or current from the high values in the transmission and distribution systems to the low values that can be utilized by low voltage metering devices. The most common usage of instrument transformers is to operate instruments or metering from high voltage or high current circuits, safely isolating secondary control circuitry from the high voltages or currents. The statistic of this report includes High voltage instrument transformer (greater than 35KV), Medium voltage instrument transformer (between 1 and 35 KV) and Low voltage instrument transformer (less than 1KV).
