SUMMARY

Semi-Flex cables are a tried and proven alternative to traditional Semi-Rigid Coaxial Cables. These cables provide comparable electrical performance to semi-rigid cables, while simultaneously allowing simple formation for use within RF/Microwave systems, as well as, for making external connections to other equipment. The outer conductor is comprised of a tin filled copper wire braid, which enables easy forming and re-forming by hand without the need for bending tools. With a Copper/Poly Foil inner layer along with Semi-Rigid style dielectric and center conductor, the Semi-Flex cables provide enhanced shielding and performance that exceeds traditional conformable cables. Semi flexible cable are mainly used in mobile communication base station, aerospace, military radar and so on.
