SUMMARY

Wedge wire screen is the most commonly using screen for filtration and separation in liquid/gas, water wasting, mining, food and so on. It is a sieve made from looped wires formed into a deep wedge-shaped section. Individual wedge wires are built into 'Panels' by threading cross rod of suitable diameter through the loops. The whole is then clamped and made secure usually by riveting or putting ring nuts over the cross rod ends or by welding. The features of this type of screen makes it an attractive solution for separating solids from liquids, retaining media, filtering, sizing, dewatering, collecting and distributing.
