SUMMARY

OSB is an engineered wood structural panel that is rapidly gaining popularity for various applications. It is a sheet material in which rather long strands of wood are bonded together with a synthetic resin adhesive. Sometimes in all three layers, but usually only in the outer layers of these panels, the strands are orientated in a particular direction. OSB varies in colour from a light straw colour to a medium brown depending on the wood species, resin system and pressing conditions. OSB's strength mainly comes from the uninterrupted wood fibre, interweaving of the long strands and degree of orientation of strands in the surface layers. Waterproof and boil proof resin binders are combined with the strands to improve internal strength, rigidity and moisture resistance.
