SUMMARY

Ozone is one of the most powerful water treatment compounds available to systems managers today. It is a technology that has been in continual commercial use for over 100 years and has distinct properties that allow disinfection of even heavily compromised water streams. Ozone Generator is a device to produce ozone by breaking apart oxygen molecules, and providing conditions suitable to having as much ozone formed as possible. As the large gap of ozone capacity between different functional products, as well as the price, in the report, the research team chooses g/h as the statistics unit. For example, if the capacity of a manufacturing company is 300 k g/h, it means the ozone capacity of all of the products produced in this year is 300 k g/h.
