SUMMARY

Peptides are synthesized by coupling the carboxyl group of one amino acid to the amino group of another amino acid molecule. Due to the possibility of unintended reactions, protecting groups are common necessary. Chemical peptide synthesis most commonly starts at the carboxyl end of the peptide, and thus progress toward the amino-terminus. This is the opposite direction of protein biosynthesis.

The global Peptide Synthesis market will reach Volume Million USD in 2017 with CAGR xx% 2018-2025. The main contents of the report including:
