SUMMARY

Polyurea coating is that derived from the reaction product of an isocyanate component and a resin blend component. It has a composition which is a combination of the above-mentioned two coating systems. The isocyanate component can be the same as for the “pure” polyurea systems. The resin blend is a blend of amineterminated and hydroxyl-terminated polymer resins and/or chain extenders. The resin blend may also contain additives, or non-primary components. To bring the reactivity of the hydroxyl-containing resins to the same level of reactivity as the amine-terminated resins, the addition of one or more catalysts is necessary.

The global Polyurea Coating market will reach xxx Million USD in 2020 with CAGR xx% 2020-2025. The main contents of the report including:
