SUMMARY

The prosthetic liner acts as a sort of 'second skin' between the movable soft tissue of the residual limb (muscles, tissue, skin) and the hard shell of the socket. This reduces movement and friction between the skin and prosthetic socket and therefore reduces the forces in the socket described earlier. The prosthetic liner connects your residual limb to the prosthetic, cushioning the sensitive skin on the residual limb and thereby alleviating problems such as pressure points.

The global Prosthetic Liners market will reach xxx Million USD in 2020 with CAGR xx% 2020-2025. The main contents of the report including:

Global market size and forecast

Regional market size, production data and export & import

Key manufacturers profile, products & services, sales data of business
