### SUMMARY

A release liner is a material made up of paper or plastic which functions as a carrier for the pressure-sensitive label stock. It has specialized non-stick coatings on one or both ends. It is coated with a release agent on one or both sides, which prevents it from making bonding with the material. The release agent stimulates release effect against any material coated with adhesives. Release liners protect the adhesive prior to its initial application. Release liners come in different forms such as in paper or plastic films and can be printed or non-printed. Primarily release liners are made up from glassine or super calendered kraft paper. In this report, we only focus on paper and film Release Liners.
