SUMMARY

A 3D Wheel Aligner is where the front wheels of an automobile are aligned to the rear axle. It's called a 3D Wheel Aligner because the term "thrust" refers to the direction in which the rear wheels are pushing. This direction should match as closely as possible to the direction that the front wheels are facing when positioned forward; a mismatch here can create undue stress on your car's suspension system and wheels, as well as reduce power and your likelihood of getting good gas mileage.
