Abstracts

Summary

Thermal lamination film is a decorative film that has been extrusion coated with a thermal adhesive, low temperature melting resin or EVA (Ethylene Vinyl Acetate), so that a heated lamination nip roll will activate the adhesive layer causing the film to adhere to a printed paper surface. The decorative film can be a biaxially oriented polypropylene film (OPP), a biaxially oriented polyethylene terephthalate film (PET), or a biaxially oriented nylon-6 film (Nylon). The decorative film can also be glossy, matte finish, or have a special modified surface for foil stamping or special adhesives such as those used in making case bound books.
