SUMMARY

Uninterrupted Power Supply (UPS) is an electrical System that provides emergency power to a load when the input power source fails. Uninterrupted Power Supply (UPS) converts incoming AC to DC through a rectifier, and converts it back with an inverter. Uninterrupted Power Supply (UPS) differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment. Three-phase UPS is UPS connected to three phase power, it is normally used in industries where the current loads are very high and need to be distributed equally so as to prevent brownouts and/or blackouts.

The global Three-phase UPS market will reach xxx Million USD in 2019 with CAGR xx% 2019-2024.
