SUMMARY

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts.
The global Ultrasonic Welding Machine market will reach xxx Million USD in 2020 with CAGR xx% 2020-2025. The main contents of the report including:
