## Abstracts

Cooled infrared imaging systems are the clear choice for long range imaging. This is due to the highly sensitive FPA technology they employ. Typically, a cooled thermal camera will utilize either InSb or MCT sensor materials. These are very good materials for a thermal array in the 3-5-micron range. However, Focal Plane Arrays made from these materials do require cryogenic cooling in order to function at their peak performance level.

The Cooled Infrared Imaging market was valued at 5521 Million US\$ in 2018 and is projected to reach 8943 Million US\$ by 2024, at a CAGR of 8.37% during the forecast period. In this study, 2018 has been considered as the base year and 2019 to 2024 as the forecast period to estimate the market size for Cooled Infrared Imaging.
