## Abstracts

Industrial Anti-scaling Chemicals are specialty chemicals designed to prevent the build-up of mineral scale deposits in various industrial processes. These chemicals are used to treat boiler water, cooling towers, and process water in industries such as oil and gas, mining, wastewater treatment, food and beverage, and pulp and paper.

The main reason for using Industrial Anti-scaling Chemicals is to prevent the accumulation of scale deposits that can clog pipes, reduce heat transfer efficiency, and corrode equipment. This can lead to reduced productivity, increased maintenance costs, and environmental concerns. Industrial Anti-scaling Chemicals work by sequestering, dispersing, and/or inhibiting the formation of mineral scales, preventing them from depositing on surfaces.

According to a report by HJResearch, the global Industrial Anti-scaling Chemicals market size is expected to reach US\$3400 million by 2022, with a compound annual growth rate of 5.7%. The growth of this market is driven by increasing demand for Industrial Anti-scaling Chemicals due to the rising awareness for cleanliness, hygiene, and sustainability across various end-use industries.
