PAA Scale Inhibitor, also known as Polyacrylic Acid Scale Inhibitor, is a water-soluble polymer that is widely used to prevent scale formation in water treatment systems. It is a chemical compound that inhibits the precipitation of minerals that can cause scaling, such as calcium carbonate, magnesium sulfate, and barium sulfate.

PAA Scale Inhibitors are commonly used in various industrial applications, including oilfield water injection systems, industrial cooling water systems, and other water treatment processes. They are effective at preventing scale buildup, which can reduce system efficiency, increase maintenance costs, and cause equipment failure.

According to market research, the global PAA Scale Inhibitor market size is expected to reach US\$727 million by 2022, with a compound annual growth rate of 6%. The growth of the PAA Scale Inhibitor industry is driven by the increasing demand for efficient and cost-effective water treatment solutions in various industries.
